PROFILE

I am a seasoned IoT Solutions Architect with a strong background in designing IoT solutions and managing RFPs. I excel in developing tailored proposals that enhance client engagement and drive sales success. My expertise lies in creating strategic, scalable IoT architectures and leading cross-functional teams to foster business growth and operational efficiency.

PROFESSIONAL EXPERIENCE

IoT Engineer Junior Analyst <i>Optimista Training & Dev India Pvt Ltd</i>	2018 – 2019
IoT Engineer Automation <i>Tirumala Engineering</i>	2019 – 2022
IoT Solution Architect Business Development <i>Niraltek Solutions</i>	2022 – 2023
IoT Solution Architect Pre Sales Engineer <i>Syook</i>	2023 – present

EDUCATION

BE computer science and engineering <i>Chennai Institute of Technology</i>	2014 – 2018 Chennai, India
--	-------------------------------

EXPERTISE

IoT Solution Architect: Technical Proposal •
IoT Architecture • R&D • PoC

RESPONSIBILITIES

Solution Architecture

Engineered out-of-the-box and HA Solution Architect that was not only scalable but also seamlessly integrated into existing client systems, ensuring superior reliability and innovative functionality under critical conditions.

Response and Documentation

Led the drafting and submission of detailed proposals in response to RFPs, RFIs, and other client inquiries, clearly articulating the benefits of solutions and ensuring compliance with all client specifications and requests.

Presentations and Demonstrations

Delivered compelling presentations and demonstrations of IoT products, emphasizing their features and business value to prospects.

Cross-Functional Collaboration

Partnered with product development, engineering, and sales teams to refine product offerings and ensure the technical feasibility of proposed solutions.

SKILLS

- | | | |
|---------------------|-----------------------|--------------------------|
| • Innovation | • Project Management | • Requirements Gathering |
| • Critical Thinking | • Product Development | • Competitive Analysis |
| • Presentation | • Prototyping | • Cost Analysis |

PROJECT EXPERIENCE

Dental Invisalign Temperature Dataloggers

I developed and demonstrated a proof of concept for an IoT-enabled solution for Invisalign aligners, integrating NFC/RFID technology with a temperature datalogger. This innovation provides dental professionals with digital insights into the product, enhancing their ability to monitor and manage aligner treatment.

2022
Niraltek/ Brazil

Asset Lifecycle Management | Proactive Breakage Detection

For Rane, Walajabad, I developed an advanced asset lifecycle management solution and proactive tool breakage detection system for expensive carbon cutting tools. Utilizing precise vibration sensors and RFID technology, the system monitored tool performance in real-time and predicted potential breakages, enhancing operational efficiency and reducing downtime.

2023
Niraltek/ India

Defect Back-Tracing Solution

At Wheels India Limited, I implemented a solution for back-tracing wheels in the event of defects reported by customers. The system captured parameters at each production station and utilized unique identifiers for each wheel, allowing precise tracking and identification. This solution enhanced quality control and streamlined the process of addressing defects.

2023
Niraltek/ India

ADNOC Onshore Rig | RTLS Solutions

ADNOC, one of the leaders in the global oil and gas industry, I engineered a High-Availability (HA) architecture for a Real-Time Location Tracking System to oversee the safety and compliance of 1,500 personnel on an onshore oil rig. Focused on integrating advanced RTLS technology with H2S gas sensors to monitor exposure and enforce safety protocols dynamically.

2023
Syook/ Abu Dhabi

Advanced Safety and Monitoring System

At Coal India Limited, I led the design and implementation of advanced safety and monitoring systems for 2,500 personnel and 800 vehicles across underground and open cast mines. I introduced AI-driven safety harness detection and vehicle vital monitoring, significantly enhancing worker and equipment safety. My architecture for the robust backhaul network ensured reliable, real-time data connectivity, streamlining mine operations.

2024
Syook/ India

Hamad International Airport | Asset and FMS

At Hamad International Airport, I engineered a cutting-edge architecture for asset and fleet management across both airside and landside operations. My solution minimized hardware dependency by leveraging Cisco Spaces for a BLE-based tracking system and Cisco IAV for a LoRa-based approach, ensuring comprehensive coverage and enhanced operational efficiency.

2024
Syook/ Qatar

Asset Tracking Solution | Construction

For Godrej, I developed an IoT-enabled solution for tracking all assets involved in the construction of high-rise buildings. This system provided complete visibility from third-party manufacturers to the Godrej site and warehouse, integrating seamlessly with their SAP system. The solution ensured real-time tracking and management of assets, significantly improving inventory accuracy and operational efficiency.

2024
Syook/ Dubai

TECHNOLOGICAL STACK

Cisco

- Cisco IAV
- Cisco Spaces
- Cisco Meraki

HPE Aruba

- Aruba Meridian
- Aruba AirWave
- Aruba ClearPass

Applications

- Audrino IDE
- Platform IO
- VS_code
